

Assignment No : 13

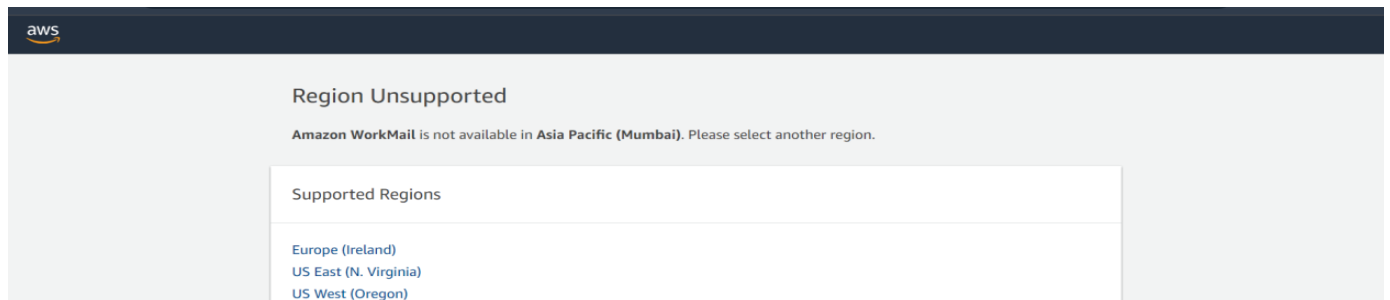

Problem statement : Create a workmail for your organization.

Steps:-

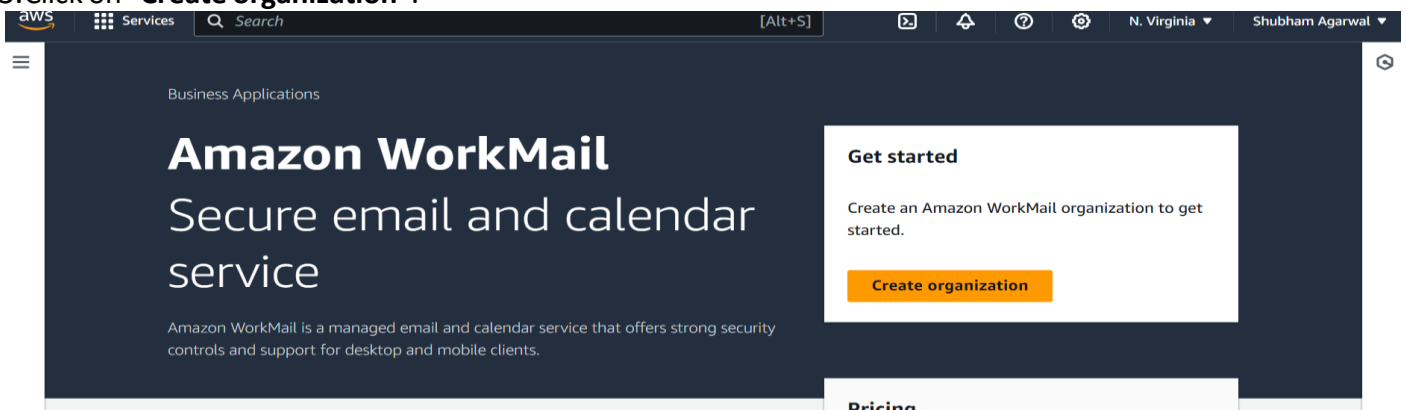

1. Navigate to the AWS console and locate the **"Work Mail"** service. Click on the first option that appears in the search results.

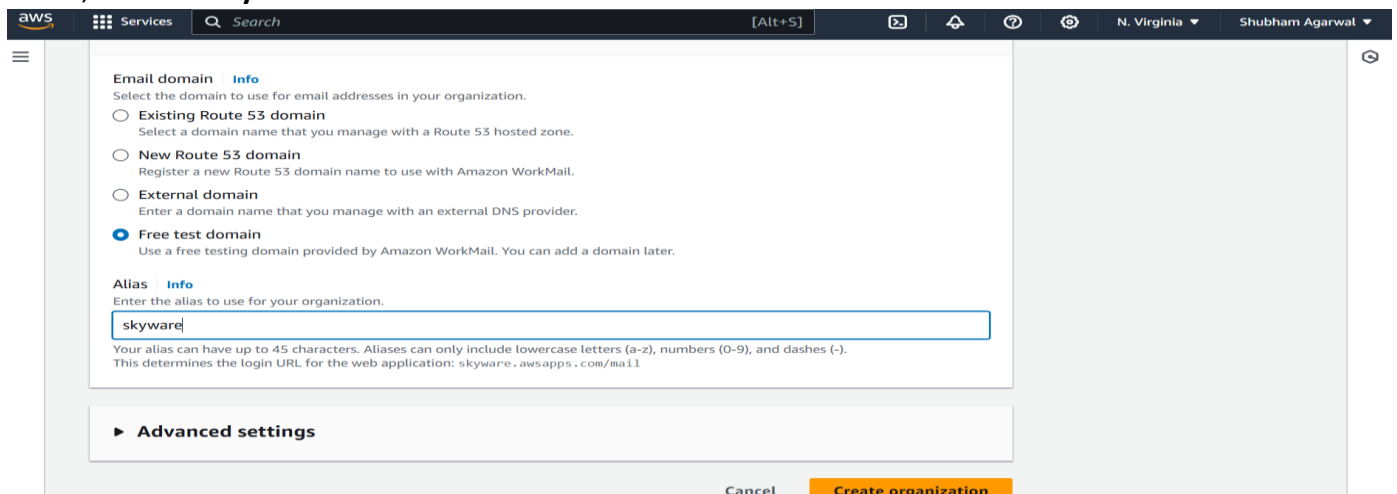

2. Choose a region from the list of supported regions. For this example, select **"USEast (N. Virginia)"**.

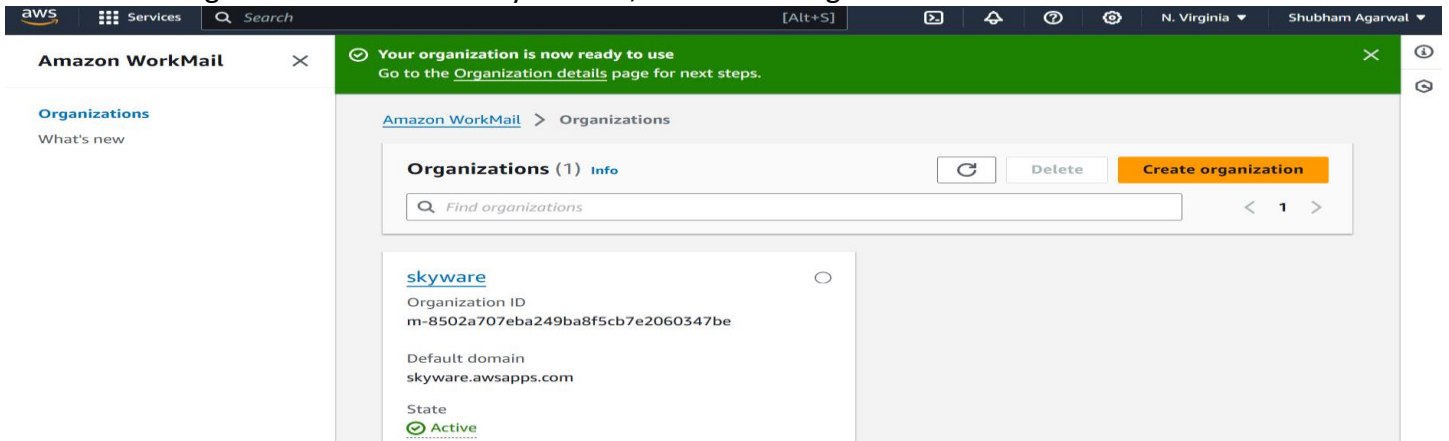

3. Click on **"Create organization"**.

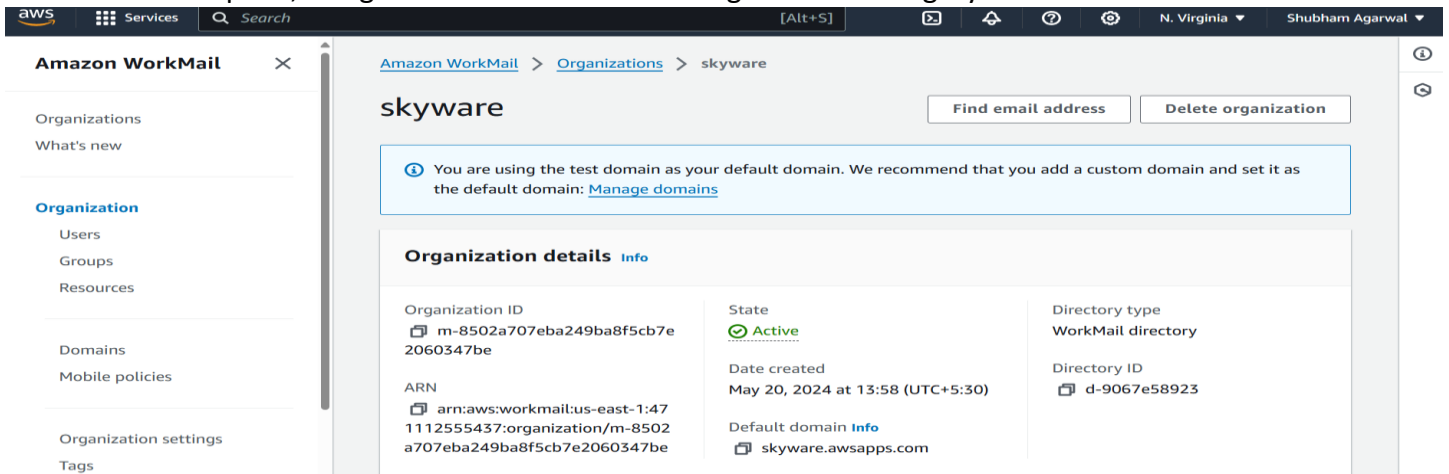

4. Select the **"Free test domain"** option from the available email domains. Then, enter an organization name, such as **"skyware."**

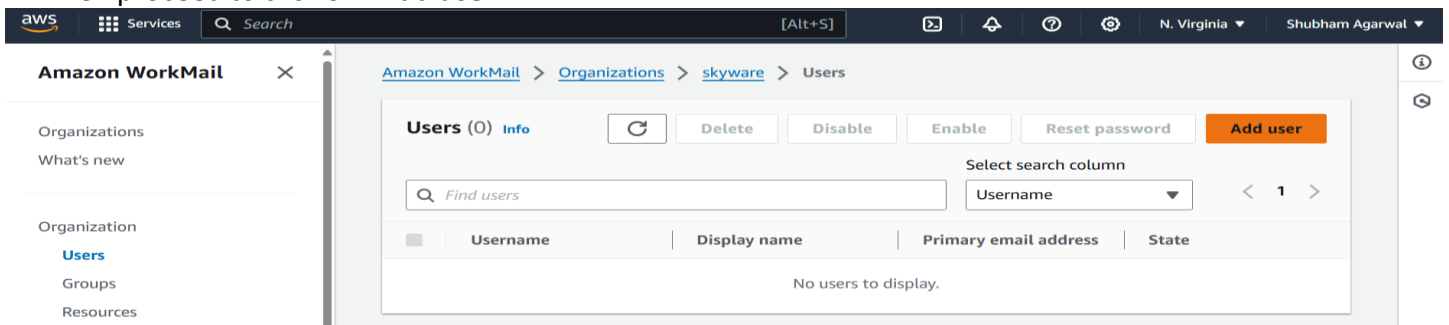

5. Once the organization is successfully created, click on the organization name.

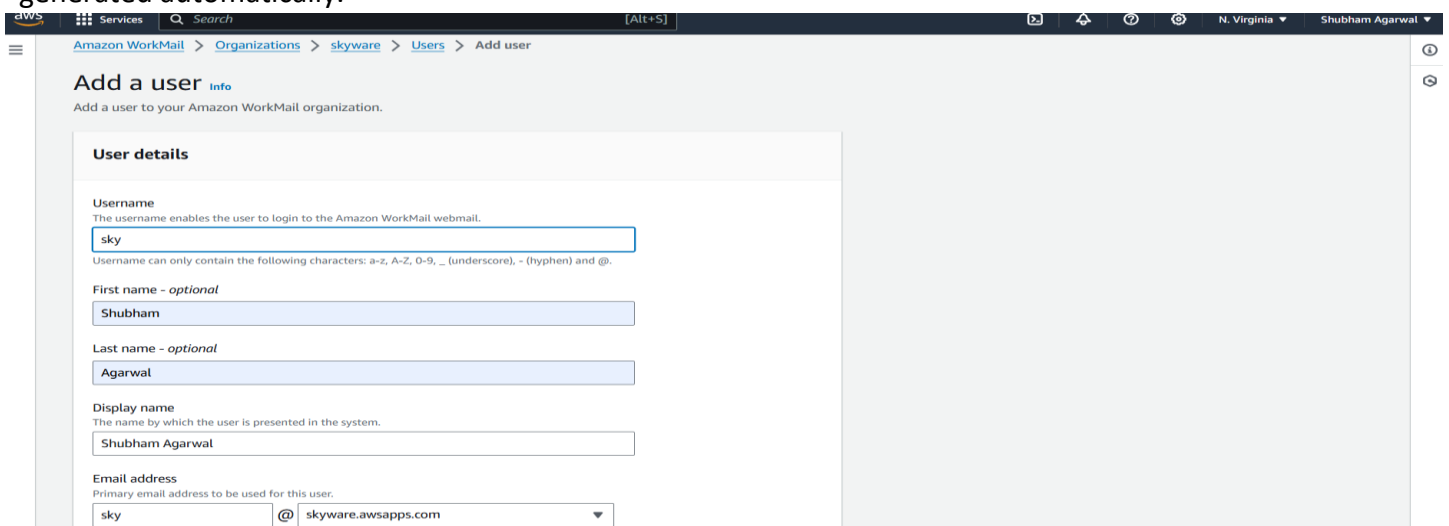

6. From the left pane, navigate to "Users" under the Organization category.

7. Then proceed to click on "Add user".

8. Enter the username, first name, and last name in their respective fields. The display name will be generated automatically.

9. Next, set a password for the WorkMail account according to the provided guidelines and click on Add user.

The screenshot shows the 'Add user' page in the AWS IAM console. The 'Show in global address list' checkbox is checked. The 'Password setup' section has two input fields: 'Password' and 'Repeat password', both containing masked characters. The 'Add user' button is highlighted in orange.

10. After successfully adding the user, return to the organizations page, click on the organization name, and navigate to the “Amazon WorkMail web application” link to proceed.

The screenshot shows the Amazon WorkMail console. The left sidebar lists 'Organizations' and 'What's new'. The main content area shows 'Organization details' for 'm-8502a707eba249ba8f5cb7e2060347be'. It includes fields for Organization ID, ARN, State (Active), Date created, and Directory type. The 'User login' section provides links for 'Desktop or mobile apps' and 'Amazon WorkMail web application'.

11. Now, enter the username and password to access your WorkMail account.
